

The atlas connects biological findings to an auditable interactive resource

A Interactive resource architecture

C Website information architecture

01	Biological story
02	Hierarchical cell atlas
03	Thymocyte development
04	TEC and stromal niche
05	Aging programs
06	Donor evidence
07	Model diagnostics
08	Methods and downloads

D Claim and evidence boundaries

Primary	Level 1 donor pseudobulk formal age inference
Exploratory	Levels 2-3 fractions and states hypothesis generation
Context	developmental and mouse data localization or direction
Boundary	external frozen transfer technical feasibility only
